## WiMax Telecom Expands

11.28.05

ZURICH – WIMAX Telecom Group, the world's only multinational WIMAX service provider, is to be awarded two sought-after licences for Croatia. The licences allow WIMAX Telecom to continue pursuing its strategy of setting up a cross-border WIMAX network for central and eastern Europe. Work on the independent wireless network in Croatia is due to begin in mid-2006. The first services will go live just shortly afterwards.

With the licences for Split and Rijeka, WIMAX Telecom Group will hold two out of the three regions in Croatia. These attractive locations fit seamlessly into the WIMAX Telecom strategy and form a new bridgehead for the steady eastward expansion of Europe's first independent and international WIMAX network.

Can't use yesterday's WLAN  
technology to solve today's problems.

#### Europe-wide perspective

With branches in Switzerland, Austria, Slovakia and Croatia, WIMAX Telecom is the world's only independent, multinational provider of WIMAX services. It holds national licences in both Austria and Slovakia, where its active networks already serve hundreds of customers. The company has a Europe-wide perspective, however, and even now is working on obtaining licences in Germany and Switzerland.
